

## NEWS RELEASE

### **DCI Networking Chosen for InfoWorld Award**

*- IT Industry media honors DCI for advanced technology infrastructure built to serve banks -*

**HUTCHINSON, KAN., December 2, 2009** – DCI, a provider of full-service bank technology and processing solutions to the financial industry, is proud to announce that DCI has been selected as an honoree in the 2009 Top 100 IT Awards by InfoWorld Media Group.

#### The Award

Each year, InfoWorld recognizes 100 organizations that have implemented and integrated technologies in innovative ways in pursuit of concrete business goals. DCI was chosen for the successful implementation of our yearlong, \$1.4 million IT infrastructure expansion including server virtualization and mass data storage management completed this fall. Among the other honorees, the DCI virtualization infrastructure project was selected as an example of how "...striking a new path in IT can reap deep organizational rewards," and how "...those leading the charge are doing far more than keeping the lights on – they are redefining their organizations."

#### The Project

The project was part of a long-term strategy to implement server virtualization and new mass storage technologies that expand DCI's capability to efficiently manage IT resources for the company's growing mix of client banks and services, including the Web-based iCore360® ASP .NET core banking software, data security, disaster recovery and future hosted cloud services. The expanded DCI infrastructure, completed with no disruption to DCI customers, efficiently leverages, consolidates – and continuously replicates – the massive processing power and terabytes of storage for our clients' core processing, Oracle databases and hundreds of virtualized servers simultaneously handling thousands of applications and transactions across our network of data centers.

#### The Future

This advanced virtualization technology and redundancy will dramatically ease future growth and capability for DCI and our clients due to its ease of scalability and suitability for the iCore360® ASP .NET core banking model and other Web-delivered, cloud services. Both DCI and our clients can be proud of the fact that this expansion – and its recognition by leading IT industry authorities like InfoWorld – ensures DCI's continued reputation as a dynamically agile, forward-thinking industry leader that provides the most advanced core processing services and support available.

**About InfoWorld**

InfoWorld is a premier print and Web resource of expert insights on information technology modernization, architecture, and strategy for IT decision makers in all industries.
