

# Proof21™

## Fast, accurate, integrated capture and proof at the teller line.

Fraud, regulations and costs for traditional item processing are at all-time highs. Now, more than ever, you need an end-to-end imaging solution that is simple, affordable and reliable.

Proof 21™ gives you complete paperless imaging and end-to-end clearing, combined with accurate proof and balance functions in a single workflow directly from your teller line. It's fully integrated into DCI's Frontline and iCore360®, and the whole process couldn't be simpler.

### How It Works

As transactions are received, your tellers simply drop checks into a miniature scanner, verify the scan, confirm the pre-filled data on the screen and the transaction is immediately processed and proven.

When required, virtual tickets are automatically created and even multi-check transactions are processed quickly and accurately – all with just a few clicks and keystrokes.

### Profitable Efficiency

Proof21 not only captures your check images at the teller line, but it also serves as a front counter proof solution, eliminating the handling of paper checks, back office operations and courier charges.

From the front office to the back office, Proof21 provides tangible benefits with a noticeable return on investment. Proof21 speeds your collection process and helps identify potential fraud. And, because your deposits to the Federal Reserve are cleared much faster, you have full funds availability the next day.

# Proof21

## Features

- Intuitive teller workflow and document handling
- Accurate and Fast Check Capture
- Automatic creation of virtual tickets and documents
- Integrated fraud detection
- Electronic delivery of balanced images and data
- Fully integrated with iCore360 and DCI FrontLine
- Variety of file formats
- Accurate CAR/LAR engine and certified scanners
- Fully compliant with X9-37 specification
- Thin client capability (Citrix, VDI, TS)

## Benefits

- Reduce teller keystrokes and data entry
- Reduce item handling and touchpoints
- Improve transaction accuracy
- Eliminate paper costs with virtual tickets/items
- Electronic signatures
- Accelerate clearing and funds availability
- Time and cost-savings in proof operations
- Eliminate courier services
- Improve customer service
- Deploy to other departments (Lockbox, Loans, etc.)
- Clear all branch work same day
- More efficient scheduling and increased production windows

Like iCore360, Proof21 is fully integrated, flexible and intuitive. Built on the same open and adaptive architecture used by iCore360 and FrontLine, it has been tested with the leading check scanners on the market and assures the highest quality CAR/LAR image recognition and federal X9-37 specifications.

Only DCI offers complete Proof21 item capture and proof, automated BSA compliance, and tools for foolproof check fraud prevention and identification verification – all directly from your teller line. We also provide comprehensive remote merchant capture solutions.
