

iCoreGO™ GoLive

Custom websites that are compliant, easy to update, responsive, and customer-friendly.

Today, more than ever, you need a website that is always up-to-date and performs well for every visitor, every time. Luckily, DCI makes it easier than ever to manage a worry-free website – with no technical expertise required.

Beautiful Practicality

We do the heavy lifting up front to build you an attractive and dynamic new website, using industry-leading tools and features designed just for community banks.

Then, we guarantee your site is fully ADA-compliant, certified secure and reliable, and monitored to ensure it's safe and ready for your visitors.

Simplified Elegance

Once your site is operational, you can easily update it yourself using a simple Content Management System (CMS) of familiar editing tools right from your browser – no complicated technical skills, software or programming code required.

You Have Control

Keeping interest rates, products, contacts and everything else on your site current is easier than using a common word processor. You can also post blogs, pinpoint your locations using Google Maps, create events, special alerts and promos, manage news and much more, all with ease. Your website is also fully ready for search engine optimization and Google Analytics.

And nothing is left to chance. You control who has access and users can preview all changes before publishing them, plus the convenient change log and roll-back features help you minimize and undo mistakes.
